ABOUT LARYNGOSCOPES

What is it?

A Laryngoscope is an instrument used to examine the larynx. The classic laryngoscope is available with a variety of blade attachments and with/without a Fiber Optic light source. The trend regarding blades has/is moving toward the disposable version.

Function

Laryngoscope blades are used as the primary tools for examination of the interior of the larynx and for placement of an endotracheal tube.

Main Feature

The Miller Laryngoscope Blade the most popular of the straight types. The side of the flange is reduced to minimize trauma and the curve at the beak or tip is extended to improve lifting of the epiglottis. These improvements facilitate greater exposure of the larynx in difficult-to-intubate patients.

The Macintosh Laryngoscope Blade the Macintosh is the predominate model of the curved blade types. During laryngoscopy, the tip or beak of the blade is compressed into the angle formed by the base of the tongue and the epiglottis, indirectly raising the epiglottis. Some sizes are available flangeless. Also available is a die-stamped or one-piece construction blade with a slightly expended flange.

FIBER OPTIC
Reusable Blade

- All blades in fiberoptic system crafted from finest non-magnet stainless steel minimize the risk of contamination.
- Cool and brighter light with no chance of tissue burning during long intubation procedures.
- Superior quality of glass fiber optic gives maximum bright illumination to view the larynx of human body.
- Removeable light guide can be autoclave separately, which makes long fife of blade.
- Autoclave able at 134°C 5 minute, for 4000 cycles at maximum light output.
- All blades and handles are made to comply with ISO 7376, allow compatibility with existing blades and handles.
- Complete range of handles also equipped with LED lamps.
- LED technology has longer additional life time with 50,000hrs and continue 2hrs operating time.
- Brighter than Xenon lamp with 12,000 – 50,000 LUX transmission light at the tip of the blade.

STANDARD CONVENTIONAL
Reusable Blade

We have accommodated the whole range of conventional lamp blades into LED choice also, which protects the patient from accidental burns during lengthy procedures.

- Standard Vacuum Lamp:
- Reliable vacuum standard lamp of 2.5V for better illumination.
- Conventional color temperature of 3000K @ 2000 LUX.
- 2hrs operating time with 20hrs life of lamp.

LED Lamp:

- LED lamp gives continuous cool and bight illumination.
- 2hrs operating time.
- Brighter than standard lamp with 12,000 LUX and also 85,000 LUX light beam.
- Available with 6500k color temperature.
- Longer additional life time with 50,000hrs.
- Whole range of blades complies with ISO 7376 standard.
- Easily replace lamp at the front of the blade.
- Autoclaved @ 134°C for 5 minutes.
- Crafted from finest stainless steel AISI 303 & 304.

Macintosh Blades

Conventional Illumination

Specifications:

- Manufactured from AISI 304 Stainless Steel.
- All Blades Compatible with ISO 7376 Standard.
- Available with LED and Standard Bulb Illumination.
- Innovation design for simple incubation and good visibility.
- Autoclave Able.
- Bulbs 2.5v Halogen Also 3.5v Led With 20000 Lux.
- These Blades Need No Maintenance –Ever But If Problem With Bulb Then It Can Be Replace.
- Quick-to-remove Lamp At The Front Of the Blades.
- The Rounded Edges of the Blades Reduce The Risk of Injury.
- **Require Conventional Handle.**

Size Measurement:

Code	Blades	B/No	Overall Length

Macintosh Blades

Fiber Optic Illumination

Specifications:

- Manufactured from AISI 304 Stainless Steel.
- All Blades Compatible with ISO 7376 Standard.
- Autoclave Able.
- **Available In 3mm, 4mm, 5mm Fiber Optic Illumination.**
- Inserted Fiber Optic Technology For Advanced Performed
- Individual Micro-fibers For Improved Light Transmission and Longer Life.
- Smooth Shape Avoids Sharp Edges and Cavities For Easy Cleaning and Sterilizing.
- Extra-Strong **Removeable Fiber Bundles** To Ensure The Best Possible Light Intensity and Durability.
- The Clear Design to the Macintosh F.O. Blades simplifies Cleaning and Autoclaving.
- Fiber Optic Pipe is removable it can be remove or replace.
- **Require Fiber Optic Handle.**

McCOY - Mega Blade

Fiber Optic Illumination

Specifications:

- **The Mccoy is a Macintosh Laryngoscope Blade With A Tip Which is adjustable through 70°. A lever Controls the Tip Angled During incubation to lift the Epiglottis, Giving a Clear View of the vocal Cords. Contact with the Upper Row of the Teeth and Unnecessary Pressure on the Tongue and soft Tissue are avoided.**
- Manufactured From AISI 304 stainless steel.
- All Blades Compatible with ISO 7376 standard.
- Autoclave Able.
- Inserted Fiber Option Technology for Advanced Performance.
- Up To 65000 individual Micro-fibers for improved Light Transmission and Longer Life.
- These Blades Need no Maintenance – Ever.
- Built with An integral, Extra-Large Fiber Optic Bundle Providing Cooler, White Light.
- Smooth Shape Avoids sharp edges and cavities for easy cleaning and sterilizing.
- Integral Design Enables Superior Cleaning by Elimination of Cracks and Cavities.
- Both Ends of the Blades are protected for life.
- **Require Fiber Optic Handle.**

Miller Optima

Fiber Optic Illumination

Specifications:

- **Highly polished 4mm replaceable, glass fiber core for focused illumination. It has a one piece snap in/out fiber core for easy cleaning and replacement. No tools required.**
- Atraumatic distal end.
- Fully autoclave able metal blade with an anti-glare satin finish. Covered by a 5 years guarantee or 4,000 autoclave, whichever is sooner.
- A green, fiber optic ISO 7376 fitting metal block.
- 3 metal ball bearing for secure fitting.
- Clear product information etched on the blade.
- Available in 3mm, 4mm, 5mm Fiber Optic Illumination.
- Inserted Fiber Optic Technology for Advanced Performance.
- Individual Micro-fibers for improved Light Transmission and Longer Life.
- Smooth shape avoids sharp edges and cavities for easy cleaning and sterilizing.
- Extra-strong Fiber Bundles to ensure the best possible light intensity and durability.
- Also available in standard illumination.

Ophthalmoscope
Otoscope
Dermatoscope
Mini Otoscope & Ophthalmoscope

ABOUT OTOSCOPE

What is it?

An otoscope is a tool which shines a beam of light to help visualize and examine the condition of the ear canal and eardrum. Examining the ear can reveal the cause of symptoms such as an earache, the ear feeling full, or hearing loss.

Function

An otoscope or auriscope is a medical device which is used to look into the ears. Health care providers use otoscopes to screen for illness during regular check-ups and also to investigate ear symptoms. An otoscope potentially gives a view of the ear canal and tympanic membrane or eardrum.

ABOUT OPHTHALMOSCOPE

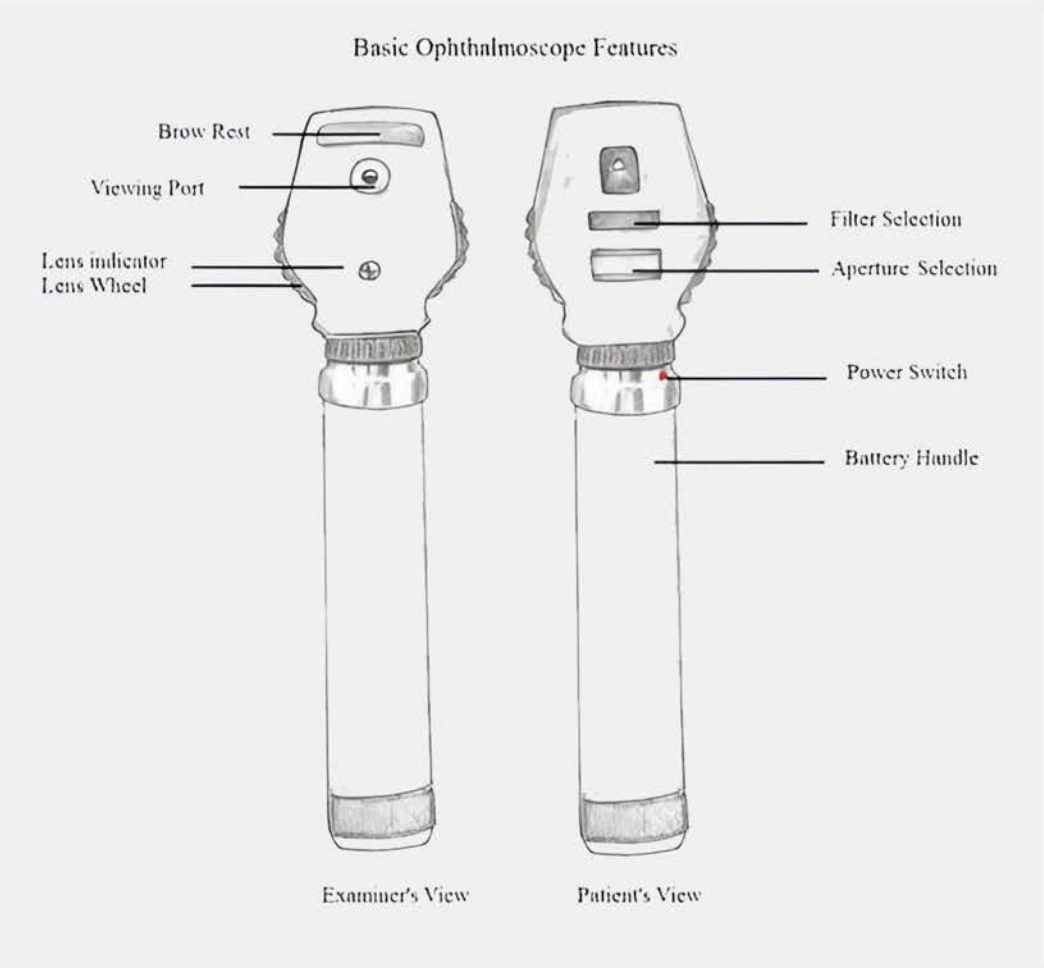
What is it?

The purpose of ophthalmoscopy is to examine the back of the eye and make sure that it is healthy. Ophthalmoscopy is a routine part of a comprehensive eye exam. Healthcare providers also may perform ophthalmoscopy during a routine physical.

Function

It is used to detect and evaluate symptoms of retinal detachment or eye diseases such as glaucoma. Ophthalmoscopy may also be done if you have signs or symptoms of high blood pressure, diabetes, or other diseases that affect the blood vessels.

Main Feature



ABOUT OPHTHALMOSCOPE

What is it?

A dermatoscope can assess structures to the depth of reticular dermis, and record images for future comparison. The basic principle of dermoscopy is transillumination of a lesion in order to study it with high magnification to visualize subtle features.

Function

Dermoscopy is performed with a handheld instrument called a dermatoscope. The procedure allows for the visualization of subsurface skin structures in the epidermis, at the dermoepidermal junction, and in the papillary dermis; these structures are usually not visible to the naked eye [2-4].
